### **Comments from All Reviewers**

**Please provide ratings and comments on the following project criteria (1 = low and 5 = high):**

1 2 3 4 **5** **Overall project quality**

**Comments:** When I first opened the desktop version I was obsessed with the jumbotron video playing. The dark theme is really neat and portrays his brother's photography aesthetic very well.

1 2 3 4 **5** **Level of creativity and originality demonstrated in the project**

**Comments:** I really enjoyed looking through this site. The creativity with colors and theme really help exemplify the aesthetic of his brother's photography.

1 2 3 4 **5** **Project contains an appropriate amount of information to meet its objectives.**

**Comments:** I really liked the dropdown information on the homepage that goes more in depth about his brother's skills. It's a nice touch because it doesn't all have to be on the homepage at first glance, only when the user clicks on it to open the info part up to learn more.

1 2 3 **4 5**    **Quality of elements making up project (HTML/CSS, photos, vector graphics, video, audio, animation, web objects/elements)**

**Comments:** I like the animations added to the elements of the page. Them appearing as the page is scrolled adds a nice touch. The video jumbotron is my favorite. One thing I noticed was that a place on the mobile version has an animation that doesn't work as well with the scroll. So it looks like the format is off and then you scroll back up and the content appears. Also on the galleries page, when you scroll down the page, the carousel of images scrolls horizontally super fast so its really hard to even see the images. If you could change that to just scrolling up and down normally and then having the ability to scroll horizontally on the carousel as a separate thing.

1 2 3 **4 5**    **Project design (color, fonts, typography, layout/composition).**  
**The overall concept/theme/unified look of the website is effective.**

**Comments:** I really liked everything about this site. One piece of feedback I have is on the image hovering on the home page, maybe having a white fade instead of a gray fade. The gray fade kind of dilutes the image shown but I think maybe a white fade would help make that one being hovered on pop out more. And the only other thing was maybe to use a different font between the titles and the body text and to keep those two fonts consistent between all the pages (I just noticed the font on the gallery page is a completely different font then the other pages)

**Do you feel this project is appropriate to include in the student's portfolio considering skill-level demonstrated?**

**Comments:** I do feel like this site is worthy of putting in the student's portfolio. Once a few feedback changes are made its in pretty top shape!

**Did you experience any technical difficulties as you navigated through the website or displayed the project?**

**Comments:** I kind of mentioned technical difficulties already above, but I guess the only other thing is to maybe make the content appearing on scroll animations faster. They do seem to take just slightly too long, as a user I almost get impatient waiting that second longer that it seems to take. Overall, very cool!!
